DETAILED ACTION

Allowable Subject Matter

1. Claims 1-3 and 5-15 are allowed.

The following is an examiner's statement of reasons for allowance: The primary reasons for the indication of the allowability of claims 1-3 and 5-15 are:

Regarding claims 1-3, 5-9 and 15, the prior art does not teach or fairly suggest in combination with the other claimed limitations an underfloor receptacle box system comprising at least one pass-through connector being at least partially disposed in said second opening, said at least one pass-through connector releasably directly connected to said electrical cable connector on the inside of said housing and to said mating power connector on the outside of said housing.

Regarding claims 10-14, the prior art does not teach or fairly suggest in combination with the other claimed limitations of a method of reconfiguring an underfloor receptacle box, comprising the steps of disconnecting an electrical cable connector from a pass-through connector, said pass-through connector being releasably directly connected to said electrical cable connector on the inside of the underfloor receptacle box and a mating power connector on the outside of the underfloor receptacle box.

These limitations are found in claims 1-3 and 5-15, and are neither disclosed nor taught by the prior art of record, alone or in combination.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

2. Applicant's arguments filed October 13, 2006 have been fully considered and they are persuasive.

In response to the Applicant's arguments the Examiner agrees that neither the combination of Domigan (US 4,536,612) in view of Rudy et al (US 4,565,416) nor the cited prior art disclose, teach or suggest an underfloor receptacle box system comprising at least one pass-through connector being at least partially disposed in said second opening, said at least one pass-through connector releasably directly connected to said electrical cable connector on the inside of said housing and to said mating power connector on the outside of said housing.
